What is claimed is:

1. An Intranet site constructing system comprising:

an Internet server which provides an Internet site;

a constructing apparatus which constructs an Intranet site based on the Internet site provided by said Internet server; and

5 an Intranet server which provides the Intranet site constructed by said constructing apparatus,

wherein said constructing apparatus includes:

a downloader which downloads the Internet site provided by said Internet server, from said Internet server via a network; and

10 a processor which produces the Intranet site having a same mechanism as that of the Internet site downloaded by said downloader, by processing the Internet site.

2. The Intranet site constructing system according to claim 1, wherein said constructing apparatus further includes an installer which installs the Intranet site produced by said processor in said Intranet server.

3. The Intranet site constructing system according to claim 2, wherein said downloader downloads a program and/or data necessary for producing the Intranet site having the same mechanism as that of the Internet site from said Internet server.

4. The Intranet site constructing system according to claim 3, wherein said processor adds original data usable within an Intranet to the data downloaded by said downloader.

5. An Intranet site constructing apparatus comprising:

a downloader which downloads an Internet site provided by an Internet server from said Internet server via a network; and

a processor which produces an Intranet site having a same mechanism as that of the
5 Internet site downloaded by said downloader, by processing the Internet site.

6. The Intranet site constructing apparatus according to claim 5, further

comprising an installer which installs the Intranet site produced by said processor in an Intranet server.

7. The Intranet site constructing apparatus according to claim 6, wherein said downloader downloads a program and/or data necessary for producing the Intranet site having the same mechanism as that of the Internet site from said Internet server.

8. The Intranet site constructing apparatus according to claim 7, wherein said processor adds original data usable within an Intranet to the data downloaded by said downloader.

9. An Intranet site constructing method comprising:

downloading an Internet site provided by an Internet server from said Internet server via a network; and

producing an Intranet site having a same mechanism as that of the downloaded
5 Internet site by processing the Internet site.

10. The Intranet site constructing method according to claim 9, further comprising installing the Intranet site in an Intranet server.

11. The Intranet site constructing method according to claim 10, wherein said downloading includes downloading a program and/or data necessary for producing the Intranet site having the same mechanism as that of the Internet site from said Internet server.

12. The Intranet site constructing method according to claim 11, wherein said producing includes adding original data usable within an Intranet to the downloaded data.

13. A program for controlling a computer to function as an Intranet site constructing apparatus comprising:

a downloader which downloads an Internet site provided by an Internet server from said Internet server via a network; and

5 a processor which produces an Intranet site having a same mechanism as that of the Internet site downloaded by said downloader, by processing the Internet site.
